"there is attained an effect that".

IN THE CLAIMS:

Cancel claims 1-7 and substitute the following:

cm A.8. A graphic processing apparatus comprising:  
P1 memory means, including a plurality of memory  
locations in an array of columns, having corresponding column  
addresses, and rows, having corresponding row addresses, for  
storing data;  
5  
P1 data processing means for specifying a row  
address in said memory means for retrieval of data from the

23

memory locations at the different column addresses within the  
specified row of memory <sup>locations</sup> ~~locations~~ and processing of the retrieved  
data to generate graphic signals;

PI

memory control means;

L

a memory data bus having m lines and

interconnecting the memory means and the memory control means to  
transmit m bits of data in parallel therebetween, where m is an  
integer; and

PI

a processor data bus having n lines and

interconnecting the data processing means and the memory control  
means to transmit n bits of data in parallel therebetween, where  
n is an integer and  $n > m$ ;

PI

said <sup>memory</sup> memory control means including storage means  
for temporarily storing data received serially on said memory  
data bus from memory locations at different column addresses of  
the memory means row corresponding with the specified row  
address, and transmitting the temporarily stored data in parallel  
on said processor data bus to said data processing means for  
processing thereof to generate graphic signals.

2  
9. A graphic processing apparatus comprising:

PI

memory means, including a plurality of memory  
locations in an array of columns, having corresponding column  
addresses, and rows, having corresponding row addresses, for  
storing data;

PI

data processing means for specifying a row  
address in said memory means for writing of data in the memory

locations at the different column addresses within the specified row of memory locations;

10 *P1* memory control means;  
*L* a memory data bus having m lines and inter-  
connecting the memory means and the memory control means to  
transmit m bits of data in parallel therebetween, where m is an  
integer; and

15 *P1* a processor data bus having n lines and  
interconnecting the data processing means and the memory control  
means to transmit n bits of data in parallel therebetween, where  
n is an integer and  $n > m$ ;

*4/24/90 6/14/90*  
*A2*  
20 *P1* <sup>22</sup> said memory <sup>control</sup> means including multiplexer means for  
multiplexing data received in parallel on said processor data bus  
into serial data and applying the serial data to said memory data  
bus for writing thereof in memory locations at different column  
addresses of the memory means row corresponding with the  
specified row address.

*3*  
10. A graphic processing apparatus comprising:  
*P1* memory means, including a plurality of memory  
locations in an array of columns, having corresponding column  
addresses, and rows, having corresponding row addresses, for  
5 storing data;

*P1* data processing means for specifying a row  
address of memory locations in said memory means for transfer of  
a data word therewith;

*P1* memory control means;

10 <sup>P1</sup> a memory data bus having m lines and inter-  
connecting the memory means and the memory control means to  
transmit m bits of data in parallel therebetween, where m is an  
integer; and

15 <sup>P1</sup> a processor data bus having n lines and  
interconnecting the data processing means and the memory control  
means to transmit n bits of data in parallel therebetween, where  
n is a multiple of m;

<sup>P1</sup>  
20 said memory control means including counter  
means, responsive to receipt on said processor data bus of a row  
address specified by said processor means to specify an n-bit  
data word in said memory means, for successively generating n  
column addresses, applying the received row address and m of the  
generated column addresses on said memory data bus to transfer  
data between said memory means and said data processor means,  
25 with the data transfer including transfer of m bits of data in  
parallel between said memory means and said memory control means,  
and transfer of n bits of data between said memory control means  
and said data processor means.

<sup>4</sup>  
11. A graphic processing apparatus comprising:

<sup>P1</sup>  
5 memory means, including a plurality of  
memory locations in an array of columns, having corresponding  
column addresses, and rows, having corresponding row addresses,  
for storing pixel information;

<sup>P1</sup>  
data processing means for specifying addresses of  
memory locations in said memory means for retrieval of pixel

information therefrom and processing of the retrieved pixel  
information to generate graphic signals;

10      P1      memory control means coupled to said memory means  
and said data processing means for retrieving pixel information  
from said memory means and applying the retrieved pixel  
information to said data processing means for processing thereof;  
and

15      P1      output means connected to said memory control  
means for outputting processed pixel information to generate  
graphics.

4 25  
-12. A graphic processing apparatus as claimed in claim  
11, wherein the pixel information comprises multi-bit pixel  
information units corresponding to one pixel.

A2  
4 6  
-13. A graphic processing apparatus as claimed in claim  
11, wherein the pixel information comprises pixel information  
units, and wherein said memory control means includes means for  
selecting the number of bits in each pixel information unit.

4 1  
-14. A graphic processing apparatus as claimed in claim  
11, wherein said memory control means includes storage means for  
temporarily storing pixel information retrieved from said memory  
means.

8  
-15. A graphic processing apparatus comprising:  
P1      memory means, including a plurality of memory  
locations in an array of columns, having corresponding column

addresses, and rows, having corresponding row addresses, for  
5 storing data;

*P1* data processing means for specifying a row  
address in said memory means for transfer of data between the  
data processing means and the memory locations at the different  
column addresses within the specified row of memory locations;

10 *P1* memory control means;

*L* a memory data bus having m lines and inter-  
connecting the memory means and the memory control means to  
transmit m bits of data in parallel therebetween, where m is an  
integer; and

*A* 15 *P1* a processor data bus having n lines and  
interconnecting the data processing means and the memory control  
means to transmit n bits of data in parallel therebetween, where  
n is an integer and  $n > m$ ;

*P1* 20 <sup>22</sup> said memory control means including storage means  
for temporarily storing data received on said memory bus from  
memory locations at different column addresses of the memory  
location row corresponding with the specified row address and  
transmitting the temporarily stored data in parallel on said  
processor data bus to said data processing means for processing  
25 thereof, and multiplexer means for multiplexing data received in  
parallel on said processor data bus into serial data and applying  
the serial data to said serial memory data bus for writing  
thereof in memory locations at different column addresses of the  
memory location row corresponding with the specified row  
30 address. *44*
